Skye Cycle Network

In 2019 SkyeConnect successfully bid to Sustrans for an options appraisal project to look at the viability of rehabilitating and linking up lengths of old abandoned single track roads to develop active transport options within and between geographical communities on Skye.

The bonus of the project would be the development of a network of cycle routes across Skye that would be of interest to locals and visitors alike.

The project has now identified routes across Skye, developed a steering group of local Trust and community organisations, identified an appropriate options appraisal mechanism and will shortly be recruiting a project officer to take the work to the next stage. T

Two communities – Broadford and Edinbane are currently developing key routes within their geographical areas using their own resources.
